

Ultra clean and sleek **flush glazed window unit**

Arcoplast NEW flush glazed interior windows are completely sealed using a fully integrated extrusion. This innovative design offers unlimited window dimensions and integrates into standard metal

framing construction. The windows are fully integrated into the Arcoplast system and is bonded together and sealed in one step with a two-component mix of high-strength finishing compound.

arcoplast

Windows Integrated for a seamless flush surface finish

1. Engineered L-bracket slips into extrusion slot

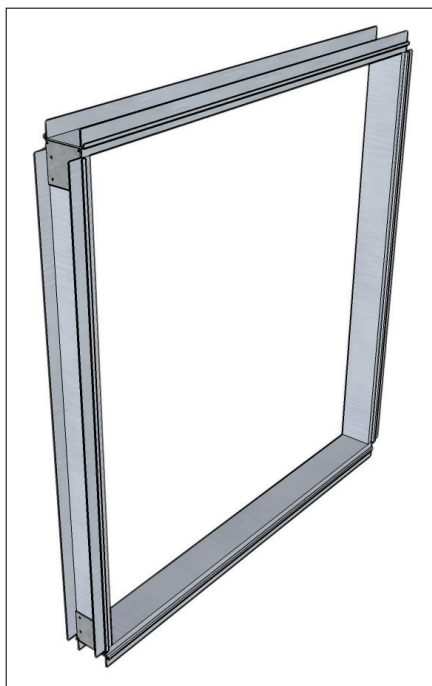

2. Second side of L-bracket becomes the mounting plate for the vertical jamb extrusion and is held in place with 4 screws

3. Fully integrated extrusion creates a rigid window frame assembly

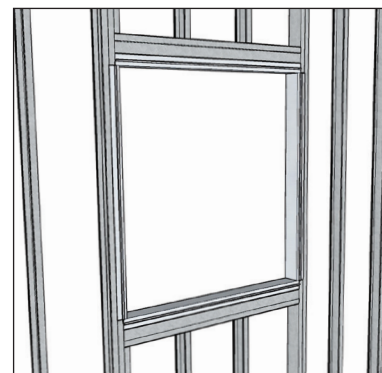

Conforms to Laboratory Biosafety Guidelines: 3rd Edition (2004) Public Health Agency of Canada on Pressure Decay (leak tightness)

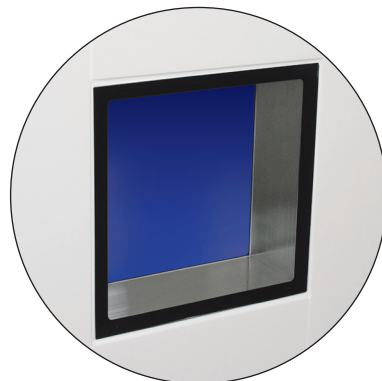

Advantages of the Arcoplast Flush Glazed Window System

- Simple Construction Methodology
- Delivers air, moisture and gas leak tight unit
- Resistant to Fungi & Bacteria and does not support microbial growth
- Resistant to high pressure wash, sanitation and decontamination regimen
- Meets regulatory requirements including FDA 21 CFR
- Greater installation flexibility reducing significantly the project timeline
- Arcoplast composite materials with virtually no maintenance cost and extremely long life cycle combine create highly sustainable performance

4. Window frame extrusion fits standard 3 5/8" (92mm) metal stud construction

5. Final window frame and single or double pane assembly is completely sealed and flush within the Arcoplast Wall System
